# Join Webex meetings from Board, Desk, and Room Series

Webex Meetings and Cisco devices are working closer together, making it possible to join Webex and Personal Room meetings directly from your device.

Join Webex meetings: You can find the meeting information in your calendar invite, e.g: 123456789 or username@example.webex.com

1. Tap the Join Webex button on your device or touch controller's home screen.
2. Enter the meeting number that is listed in the Webex Meetings invite, and tap Join to join the meeting.

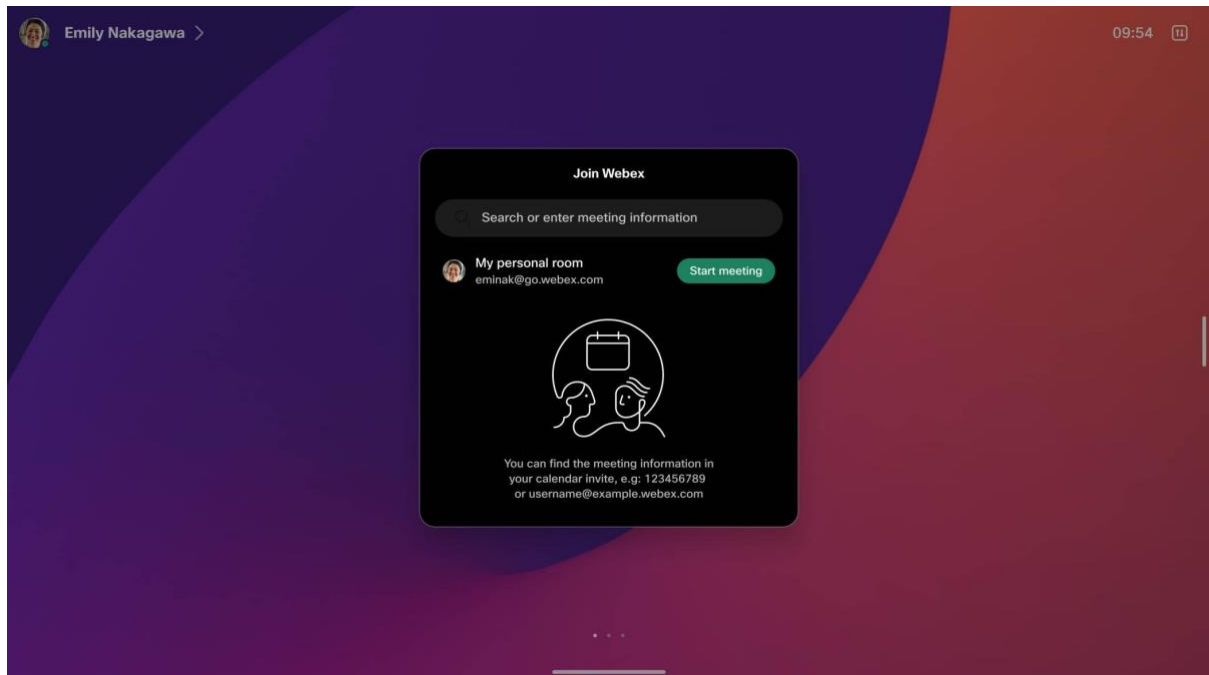

If it's a Webex meeting associated with a Webex space, you can also find the meeting details in the space. Open the space, click Meetings and select the meeting. The details appear under Meeting information.

Start Personal Room meetings: Your Personal Room is your own virtual meeting space that's open all the time, no booking needed. Others can easily join you using your Personal Room link, email, or phone number. Starting a Personal room meeting from the Join Webex menu is only available for devices in personal mode.

When there is only one participant, the meeting ends after 30 minutes if there is no interaction.

1. Tap Join Webex on the device or touch controller's home screen.
2. Tap Start meeting.

When you're joining a Personal Room meeting, you can use the person's name or email address to search for their Personal Room.

Join Webex meetings with OBTP: When a scheduled meeting appears on the device screen, the device wakes up from stand-by. The meeting appears 5 minutes before its starting time. Tap Join to participate in the meeting. You can join the meeting at any time, even if the meeting has already started.
